## **Dr Bruce Lee** **Director, CSIRO Food Futures National Research Flagship**

Dr Bruce Lee joined CSIRO as Director of the Food Futures National Research Flagship in January 2004 after 22 years working abroad in Germany, the UK and Switzerland.

Dr Lee provides science and business development leadership to a team of more than 250 leading research scientists and technical staff.

He has played a pivotal role in world-leading agri-food technology developments and has a track record of success in R&D, business development and commercialisation in the private sector.

Dr Lee's extensive international experience, particularly in the translation of agribusiness research into outcomes and realisable impact from the farm to manufacturing industries, is guiding the Flagship towards its goal of transforming Australia's agrifood sector to increase international competitiveness and add A\$3billion value annually via new technologies and strategic collaborations.

Dr Lee was part of the team that brought the first commercial biotech corn product into the US market, has served on a number of European industry associations and speaks regularly at international agribusiness and food industry conferences.
